WHAT TO CONFIRM BEFORE ORDERING

- Name the form: racemic α-lipoic acid and R-α-lipoic acid are different specifications and different prices.
- Melting point and assay together are the usual identity screen; a single assay figure does not separate the forms.
- The material is light- and heat-sensitive; the pack and the storage condition belong in the specification.

- Confirm the destination market's status before quoting.
- Do not use the page as a label or a claim.

> **Indicative document.** This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
