WHAT TO CONFIRM BEFORE ORDERING

- Name the form: betaine anhydrous and betaine hydrochloride are different label ingredients.

- Ask for the assay and the water content; betaine is hygroscopic and the anhydrous grade is the usual supplement form.
- Confirm the particle size and the flow for the capsule or stick pack you will run.
- The trimethylglycine name is the same molecule; the label should use one name consistently.

> **Indicative document.** This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
