APPLICATIONS

- Capsules and tablets
- Powder sticks and drink mixes
- Gummies and chews

AVAILABLE FORMS

- Crystalline powder, 80 mesh
- 1% or 2% dilution on request
- Granulated on request

WHAT TO CONFIRM BEFORE ORDERING

- At a microgram dose, the dilution and the blend uniformity decide the label; the drum assay is only the start.
- Ask for the specific rotation and the assay method; biotin has more than one isomeric form.

- Confirm the carrier and the overage if the grade is a 1% or 2% dilution.
- Biotin is stable dry; moisture and the blend matrix are the practical risks.

> **Indicative document.** This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
