WHAT TO CONFIRM BEFORE ORDERING

- Name the hydrate: calcium gluconate monohydrate and the anhydrous salt carry different calcium figures per gram.
- Ask for the calcium figure and the water content; the low calcium figure per gram drives the fill weight.
- Calcium gluconate and calcium lactate are different salts with different calcium figures.
- Do not use the page as a label or a claim: the finished product's status is a separate legal question.

Indicative document. This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
