WHAT TO CONFIRM BEFORE ORDERING

- Confirm the chromium species: picolinate, chloride and polynicotinate are different label ingredients.
- At a microgram dose, the dilution and the blend uniformity decide the label; the drum assay is only the start.
- Ask for the chromium assay and the picolinate identity; a generic chromium figure is not enough.

- Confirm the carrier and the overage if the grade is a dilution.

> **Indicative document.** This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
