WHAT TO CONFIRM BEFORE ORDERING

- Name the salt: copper gluconate and copper bisglycinate are different label ingredients with different copper figures.
- Ask for the copper figure and the assay; the salt name does not state the dose.
- The gluconate carries less copper per gram than the chelate; the fill weight follows.
- Do not use the page as a label or a claim: the finished product's status is a separate legal question.

Indicative document. This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
