WHAT TO CONFIRM BEFORE ORDERING

- Name the folate form: folic acid, calcium folinate and methylfolate are different label ingredients.
- Ask for the assay basis and the related-substance profile; folic acid is light-sensitive and degrades to different products.

- Confirm the water content; the anhydrous basis and the as-is basis are not the same number.
- Folic acid is used at a low dose, so the blend uniformity matters more than the drum assay.

> **Indicative document.** This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
