WHAT TO CONFIRM BEFORE ORDERING

- Name the salt: glucosamine sulfate and glucosamine hydrochloride are different products with different counter-ions and labels.
- Ask for the assay and the sulfate figure; the 2KCl form carries potassium chloride, which matters to the label.
- The material is hygroscopic; the pack and the storage condition belong in the specification.

- Do not use the page as a label or a claim: the finished product's status is a separate legal question.

> **Indicative document.** This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
