WHAT TO CONFIRM BEFORE ORDERING

- Name the salt and the molecular weight: sodium hyaluronate, hyaluronic acid and a low-molecular-weight grade are different label ingredients.
- Ask for the glucuronic acid and sodium hyaluronate figures together; one without the other does not prove the polysaccharide.
- Confirm the molecular-weight method and the intended grade; the same assay can hide a different chain length.
- The powder is hygroscopic; the pack and the dose-room humidity belong in the specification.

> **Indicative document.** This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
