WHAT TO CONFIRM BEFORE ORDERING

- Name the form: L-lysine free base and L-lysine hydrochloride are different products with different chloride and label positions.
- Ask for the assay and the rotation; the free base is more hygroscopic and more alkaline than the hydrochloride.
- The material is hygroscopic; the pack and the storage condition belong in the specification.
- Do not use the page as a label or a claim: the finished product's status is a separate legal question.

Indicative document. This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
