WHAT TO CONFIRM BEFORE ORDERING

- Name the hydrate: the anhydrous chelate and the hydrate are different products with different magnesium content and fill weight.
- Ask for the magnesium figure, the glycine ratio and the water; the three together identify the grade.

- The material is hygroscopic; the pack and the storage condition belong in the specification.
- Do not use the page as a label or a claim: the finished product's status is a separate legal question.

> **Indicative document.** This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
