WHAT TO CONFIRM BEFORE ORDERING

- Name the hydrate: the hexahydrate and the anhydrous salt carry different magnesium figures per gram.
- The material is deliquescent; the pack, the liner and the dose-room humidity belong in the specification.
- The chloride is part of the label and the taste; magnesium chloride and magnesium sulfate are different salts.
- Do not use the page as a label or a claim: the finished product's status is a separate legal question.

Indicative document. This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
