WHAT TO CONFIRM BEFORE ORDERING

- Name the salt and the isomer: magnesium L-threonate is not magnesium threonate as a generic mixture.

- Ask for both the salt assay and the elemental magnesium figure; the label may declare either.
- The magnesium content is low, so the capsule fill is driven by the salt dose, not by the magnesium percentage.
- Confirm the pH and the water content; both affect the blend and the capsule fill.

> **Indicative document.** This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
