WHAT TO CONFIRM BEFORE ORDERING

- Name the form: niacin (nicotinic acid) and niacinamide are different label ingredients.
- Ask for the assay basis and the melting range; both are identity checks that an assay alone does not replace.

- The free acid is acidic in solution; trial the matrix and the taste before fixing the label.
- Confirm the water content and the particle size for capsule fill and blend uniformity.

> **Indicative document.** This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
