WHAT TO CONFIRM BEFORE ORDERING

- Name the form: riboflavin 5-phosphate and plain riboflavin are different products with different solubility and assay bases.
- Ask for the assay and the phosphorylation profile; the free acid and the sodium salt are also different specifications.
- The material is light-sensitive; the pack and the storage condition belong in the specification.
- Do not use the page as a label or a claim: the finished product's status is a separate legal question.

Indicative document. This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
