WHAT TO CONFIRM BEFORE ORDERING

- Name the hydrate: sodium molybdate dihydrate and the anhydrous salt carry different molybdenum figures per gram.
- Ask for the molybdenum figure and the assay; the salt name does not state the dose.
- The material is soluble and the dose is small; the fill weight and the blend uniformity follow.
- Do not use the page as a label or a claim: the finished product's status is a separate legal question.

Indicative document. This sheet describes the grade we can quote; it is not a batch COA and does not confirm a result for a specific lot. Final specification, contaminant limits and documentation are agreed in writing before the order. The form, hydrate state, ligand ratio and method are release parameters, not marketing descriptions.
